***Allowable Subject Matter***

- Claims 1-8 and 20-26 are allowed.

The following is an examiner's statement of reasons for allowance: the prior art fails to show or fairly suggest a method for processing signals in an RF subsystem that includes intercoupled mems devices that serve to attenuate undesirable signals, determined by their frequencies, where a conversion between first and second frequencies occurs of the admitted signal. Further not shown nor fairly suggested is a micromechanical device to accomplish said method including using the device in a mixer-filter function, capable of being coupled to other electronics for converting and filtering the desired frequency range without the need for a low noise amplifier.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The prior art made of record reads on at least some aspects of the claimed invention.

Direct inquiry to Examiner Dougherty at (571) 272-2022.
